Convention on the Prohibition of the Development, Production, Stockpiling, and Use of Chemical Weapons and on Their Destruction St. Martin's Griffin

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.

Red Storm Rising DIANE Publishing

"A former Wall Street quantitative analyst sounds an alarm on mathematical modeling, a pervasive new force in society that threatens to undermine democracy and widen inequality,"--
NoveList.

Absinthe & Flamethrowers Moody Publishers

In the 1970s tactical nuclear warfare was a topical issue. The introduction of the new generation of tactical nuclear weapons into Europe could have had disastrous consequences. These new weapons had already been developed by nuclear-weapon laboratories and pressures were growing for their deployment. On first sight, smaller and more accurate nuclear weapons may seem more humane and militarily preferable to the relatively high-yield tactical nuclear weapons currently deployed. But some of these new types of weapons would blur the distinction between nuclear and conventional weapons and their use would make escalation to strategic nuclear war extremely likely. Indeed, the argument for these new weapons is that their use in wartime is more credible (and therefore 'acceptable') than current types of tactical nuclear weapons. This perception could easily lead to the exceedingly dangerous idea that some types of tactical nuclear war were 'winnable'. The fact has to be faced that any use of nuclear weapons is almost certain to escalate until all available weapons are used. To believe otherwise is to believe that one side will surrender before it has used all the weapons in its arsenal. History shows that this is most unlikely to happen. Because of its importance, SIPRI organized a meeting to discuss the whole question. Originally published in 1978, this book is the outcome of that meeting.

SIPRI Yearbook 2021 Crown Publishing Group (NY)

Being a wizard takes training, practice, and a few tips from an expert. Author and professional toy designer John Austin, creator of the popular MiniWeapons of Mass Destruction series, provides dozens of projects for up-and-coming sorcerers. Each of the 35 projects in Labcraft Wizards is explained through illustrated step-by-step instructions and uses simple, everyday materials. Build an Enchanted Hourglass out of empty soda bottles, plastic hangers, and sand. Transform a chicken egg into a colorful, bouncy Dragon Egg using vinegar and food coloring or mix up a batch of Ogre Snot with corn syrup and gelatin. Through its creative activities, Labcraft Wizards helps eager minds explore basic concepts in chemistry and physics through experimentation, encourages scientific observation, and fuels imaginations.

How to Build a Nuclear Bomb U of Nebraska Press

The autobiography every true American has been waiting for: a shockingly candid and raw confessional from a national treasure. From his humble beginnings in a desolate Iowa coal mining town, his years at Our Lady Queen of Chewbacca High School to his odds-defying climb to the dizzying heights of becoming America's most trusted and beloved television News Anchor, Ron Burgundy pulls no punches in Let Me Off at the Top! In his very own words Burgundy reveals his most private thoughts, his triumphs and his disappointments. His life reads like an adventure story complete with knock down fights, beautiful women and double-fisted excitement on every page. He has hunted jackalopes with Bobby Kennedy and Peter Lawford, had more than his share of his amorous exploits, and formed the greatest on-air team in the history of televised news. Along the way, he hobnobbed with people you wish you knew and some you honestly wish you didn't -- celebrities, presidents, presidents' wives, celebrities' wives, dogs, and, of course Veronica Corningstone, the love of his life. Walter Cronkite, Barbra Streisand, Katie Couric, the list goes on. Who didn't Mr. Burgundy, or "Ron" as he is known to his friends, rub elbows with in the course of his colorful and often criminal life? This may well be the most thrilling book ever written, by a man of great physical, moral and spiritual strength and not surprisingly a great literary talent as well. This book deserves a real shot at a Pulitzer Prize. In fact if it doesn't win one then we will finally have proof that the Pulitzer is rigged. Ron Burgundy has taken the time to write a book. We owe it to him, as honest Americans, to read it.

Unscrewed Crown Archetype

A Selection of the Scientific American Book Club Want to add more excitement to your life? This daring combination of science, history, and DIY projects will show you how. Written for smart risk takers, it explores why danger is good for you and details the art of living dangerously. Risk takers are more successful, more interesting individuals who lead more fulfilling lives. Unlike watching an action movie or playing a video game, real-life experience changes a person, and Gurstelle will help you discover the true thrill of making black powder along with dozens of other

edgy activities. All of the projects—from throwing knives, drinking absinthe, and eating fugu to cracking a bull whip, learning bartitsu, and building a flamethrower—have short learning curves, are hands-on and affordable, and demonstrate true but reasonable risk. With a strong emphasis on safety, each potentially life-altering project includes step-by-step directions, photographs, and illustrations along with troubleshooting tips from experts in the field.

In Defense of Kindness Andrews McMeel Publishing

Why have nuclear weapons not been used since Hiroshima and Nagasaki in 1945? Nina Tannenwald disputes the conventional answer of 'deterrence' in favour of what she calls a nuclear taboo - a widespread inhibition on using nuclear weapons - which has arisen in global politics. Drawing on newly released archival sources, Tannenwald traces the rise of the nuclear taboo, the forces that produced it, and its influence, particularly on US leaders. She analyzes four critical instances where US leaders considered using nuclear weapons (Japan 1945, the Korean War, the Vietnam War, and the Gulf War 1991) and examines how the nuclear taboo has repeatedly dissuaded US and other world leaders from resorting to these 'ultimate weapons'. Through a systematic analysis, Tannenwald challenges conventional conceptions of deterrence and offers a compelling argument on the moral bases of nuclear restraint as well as an important insight into how nuclear war can be avoided in the future.

'Cubicle farms are full of enemy combatants begging to be taken out.' WIRED Achieve clandestine ends practically and inexpensively with *Desk Wars* - perfect for do-it-yourself spy enthusiasts. Follow fully illustrated step-by-step instructions to build 30 miniature secret weapons and surveillance tools from stationery, transforming common household items into uncommon gadgets and sidearms. Assert dominion over the desktop with these cunning contraptions:

Let Me Off at the Top National Academies Press

This text is a compilation of step-by-step instructions for how to build nine different types of catapults and trebuchets. Each set of instructions includes dimensional drawings of all wooden parts, lists of required hardware and sources, an abundance of photos, diagrams, and detailed descriptions of the assembly process.

Mini Weapons of Mass Destruction: Build a Secret Agent Arsenal Hachette UK

BAD BEHAVIOR 101 Forget about Punk'd. Or any of those other stupid hidden camera shows. Executing the perfect prank is an art that demands deft craftsmanship and sly cunning. Whether you're talking about a good-natured practical joke between roommates or an elaborate hit against a nosy neighbor, nothing sends a message with satisfying elegance like a well-designed prank. But how can you, just some regular schmo, become an ultimate prankster? Welcome to Prank University! Here are 100 essential pranks—from classics such as Doorbell Drench and Silly-String Sleep to more modern operations like Quick Leg Shave, Wasabi Paste, and Plastic Forking (you'll have to look inside for that one, but trust us, it's good). Step-by-step instructions and ingenious diagrams make these diabolical schemes all too easy. An icon system denotes prank difficulty as well as the number of accomplices needed, costs involved (if any), and whether to film the event for posterity. Just remember to use this information judiciously . . . you never know when some young jokester (also armed with this book) might be coming after you. With Prank University, jackass class is in session!

Badass Bricks Chicago Review Press

Outlines what it takes to make chemical, biological, and nuclear weapons; suggests who might be able to produce and use such weapons; and examines how effective countermeasures might be. *Art of the Catapult* Chicago Review Press

The popular Sneaky Uses series continues with an all-new volume of more than thirty outlandish inventions made from ordinary objects and materials. Author and mad scientist Cy Tymony has turned his passion for tinkering into sneaky science movement, teaching parents and kids all over the world how to turn ordinary household items into amazing inventions. In this volume of his popular Sneaky Uses series, he shares more than thirty new projects, including homemade toys, games, fashion, science tricks, and more! Each activity begins with a complete list of materials followed by easy-to-follow, step-by-step instructions, and helpful illustrations. Fans of all ages will use their ingenuity to turn everyday objects into something extraordinary with the help of Super Sneaky Uses for Everyday Things.

Adventures, friendships, and faith-testers . . . all under the watchful eye of a great big God. The Tree Street Kids live on Cherry, Oak, Maple, and Pine, but their 1990s suburban neighborhood is more than just quiet, tree-lined streets. Jack, Ellison, Roger, and Ruthie face challenges and find adventures in every creek and cul-de-sac—as well as God's great love in one small neighborhood. In Book 2 of the Tree Street Kids series, Jack and his friends learn some survival skills at the church's summer camp. They'll need them! Determined to find Ruthie's lost cat and protect Jack's new puppy from Fang, the local wildlife, the kids head deep into the woods. Just when they think they've cornered the "enemy," the kids realize someone has gone missing. Is Fang up to no good? Or will faith and friendship be enough to see the kids make it out alive?

The Motorboat Book Simon and Schuster

Soon to be a Netflix Original Series! "Wildly imaginative." —President Barack Obama on *The Three-Body Problem* trilogy This near-future trilogy is the first chance for English-speaking readers to experience this multiple-award-winning phenomenon from Cixin Liu, China's most beloved science fiction author. In *The Dark Forest*, Earth is reeling from the revelation of a coming alien invasion-in just four centuries' time. The aliens' human collaborators may have been defeated, but the presence of the sophons, the subatomic particles that allow Trisolaris instant access to all human information, means that Earth's defense plans are totally exposed to the enemy. Only the human mind

remains a secret. This is the motivation for the Wallfacer Project, a daring plan that grants four men enormous resources to design secret strategies, hidden through deceit and misdirection from Earth and Trisolaris alike. Three of the Wallfacers are influential statesmen and scientists, but the fourth is a total unknown. Luo Ji, an unambitious Chinese astronomer and sociologist, is baffled by his new status. All he knows is that he's the one Wallfacer that Trisolaris wants dead. Backyard Ballistics Chalice Press

When did kindness become a sign of weakness? What if kindness actually has the power to change the world? Culture is at a crossroads when it comes to kindness. These days we either view kindness as an inert act based on the absence of being a jerk, or we see acts of kindness as heroic and herculean, beyond the reach and capability of mere mortals. Choosing kindness is also exhausting. The public and private back-and-forth exchanges of hatred and de-humanizing that is more about ratings, retweets, and winning than relationships and community is taking a toll on our motivation to even contemplate kindness as a valid response. In *Defense of Kindness* makes a case that we each can choose

kindness as a way to experience community and wholeness in new ways. With a playful spirit, tender heart, and unwavering commitment to justice, "kindness enthusiast" Reyes-Chow explores the many ways in which kindness can bring about healing, wholeness, and hope in ourselves and the world. Through unfiltered sharing of his own experiences, Bruce invites the reader into an adventure of discovery and rediscovery of kindness of heart, mind, spirit, and action.

Tactical Nuclear Weapons Chicago Review Press

Combining science, history, and DIY pyrotechnics, this book for the workbench warrior explains humankind's most useful and paradoxical tool: fire. William Gurstelle, author of the bestselling *Backyard Ballistics*, presents 25 projects with instructions, diagrams, photos, and links to video demonstrations that enable people of all ages to explore and safely play with fire. From Franklin's stove to Diesel's engine, explosive and fascinating tales are told of the great pyromaniacs who scientifically revealed the mysteries of fire such as "Gunpowder" Joseph Priestly, who discovered oxygen; Antoine Lavoisier, the father of chemistry; and Humphrey Davy, whose chemical discoveries and fiery inventions saved thousands of lives. By following the directions inside, the curious can replicate these breakthrough scientists' experiments and inventions from the simply fascinating one-candlepower engine to the nearly magical fire piston and an

incredible tornado of fire.

Sneaky Uses for Everyday Things Chicago Review Press

LEGO is fun. So are toy weapons. The only thing more fun is LEGO toy weapons! A compilation of badass brick weapons—some that actually even work—this book is designed for the adult brick enthusiast. Each project is original (i.e., not from a LEGO kit) and is accompanied by how-to schematics and full-color original photographs of the finished object. Dangerous and exciting projects include: Tomahawk Broadsword Claymore (two-handed sword) Ninja throwing star M1911 pistol Siege tower Gatling gun MK2 grenade Scythed chariot Paris gun Flamethrower And many more! Hobbyists love to make weapons, and this book goes far beyond the kits that are available to showcase forty projects for amazing weapons. The projects range from medieval to modern, from small hand grenades to an actual working guillotine to an assault amphibious vehicle. *Badass Bricks* will keep adults occupied for hours and is the perfect book for the adult brick enthusiast, weapons hobbyist, or all-around badass!

The Dark Forest Chicago Review Press

Utilizing easy-to-find and inexpensive materials, this handy resource teaches desktop warriors how to build a multitude of medieval siege weapons for the modern era. Thirty-five projects include a marshmallow catapult, a chopstick bow, a bottle cap crossbow, and more.
