The most authoritative and comprehensive guide available on postgraduate grants and professional funding worldwide. For over twenty years The Grants Register has been the leading source for up-to-date information on the availability of, and eligibility for, postgraduate and professional awards. With details of over 3,000 awards, The Grants Register is more extensive than any comparable publication. Each entry has been verified by the awarding bodies concerned ensuring that every piece of information is accurate. As an annual publication, each edition also provides the most current details available today. The Grants Register provides an ideal reference source for those who need accurate information on postgraduate funding: careers advisors, university libraries, student organisations, and public libraries. Also available on CD-ROM.

The design and functional complexity of medical devices and systems has increased during the past half century, evolving from the level of cardiac pacemakers to magnetic resonance imaging devices. Such life-saving advancements are monumentally advantageous, but with so much at stake, a step-by-step manual for biomedical engineers is essential. This edition of a bestselling textbook utilizes a strong design perspective to provide designers with a thorough overview of the field, including topics related to databases, process analysis, and device improvement. Covers All Necessary Design Aspects for Advanced Biomedical Projects Designed primarily for senior bioengineering students in the formative stages of planning their design project, *Design of Biomedical Devices and Systems* is also beneficial to graduate students in the field and practitioners working with medical devices. This standard-setting resource includes: A variety of open-ended design problems and examples An overview of device definitions and reliability A discussion of testing and hardware verification and validation principles Detailed photographs and illustrations within each chapter Systematic approaches to device development and maintenance are mandated to ensure safe and effective devices for the patient, an economical and competitive success for the manufacturer, and a reliable, cost-effective investment for the user. This authoritative textbook answers the call. A solutions manual is available for instructors wishing to convert this reference to classroom use.

EUROSHOCK - Drag Reduction by Passive Shock Control Pergamon

New materials enable advances in engineering design. This book describes a procedure for material selection in mechanical design, allowing the most suitable materials for a given application to be identified from the full range of materials and section shapes available. A novel approach is adopted not found elsewhere. Materials are introduced through their properties; materials selection charts (a new development) capture the important features of all materials, allowing rapid retrieval of information and application of selection techniques. Merit indices, combined with charts, allow optimisation of the materials selection process. Sources of material property data are reviewed and approaches to their use are given. Material processing and its influence on the design are discussed. The book closes with chapters on aesthetics and industrial design. Case studies are developed as a method of illustrating the procedure and as a way of developing the ideas further.

This proceedings volume of the ISEA 2006 examines sports engineering, an interdisciplinary subject

which encompasses and integrates not only sports science and engineering but also biomechanics, physiology and anatomy, and motion physics. This is the first title of its kind in the emerging field of sports technology.

This volume contains the description of an EC-sponsored program to study all relevant aspects of shock/ boundary-layer interaction control, the latter designed to improve aircraft performance at design (cruise) and off-design conditions. The work being presented includes a discussion of basic control experiments and the corresponding physical modeling, to account for shock control and a discussion of the airfoil experiments conducted for code validation and control assessment, in conjunction with the basic experiments and computations. The contents is comprised of a section giving a broad overview of the research carried out here and more detailed individual contributions by the participants in the research. Der Band enthält den Abschlußbericht eines von EU geförderten Projekts EUROSHOCK, das alle relevanten Aspekte der Kontrolle von Stoßfronten und Grenzschichten (wichtig z.B. für die Verbesserung der Flugeigenschaften von Flugzeugen) untersuchte. Neben einer ausführlichen Diskussion der grundlegenden Kontrollexperimente und der zugrundeliegenden Modellierung werden auch die Versuche an Tragflächen beschrieben, die zur Validierung von Modellrechnungen durchgeführt werden. Darüber hinaus enthält der Band auch die detaillierten Ergebnisse der Teilnehmer an dem Forschungsprogramm.

There have been many developments in pressure equipment technology over the last 30 years culminating in the development of new standards and legislation. The aim of this collection of papers is not only to document views of leading professionals in various fields of pressure equipment technology, but also to look into the future and identify the next areas for development. *Developments in Pressure Equipment - Where to Next?* brings together international authors to provide an invaluable and comprehensive insight into the latest innovations in the field. Topics include: Legislation and standardization Design and materials Manufacture and inspection Integrity and life assessment Towards the future

A new edition of the most popular book of project management case studies, expanded to include more than 100 cases plus a "super case" on the Iridium Project Case studies are an important part of project management education and training. This Fourth Edition of Harold Kerzner's *Project Management Case Studies* features a number of new cases covering value measurement in project management. Also included is the well-received "super case," which covers all aspects of project management and may be used as a capstone for a course. This new edition: Contains 100-plus case studies drawn from real companies to illustrate both successful and poor implementation of project management Represents a wide range of industries, including medical and pharmaceutical,

aerospace, manufacturing, automotive, finance and banking, and telecommunications Covers cutting-edge areas of construction and international project management plus a "super case" on the Iridium Project, covering all aspects of project management Follows and supports preparation for the Project Management Professional (PMP®) Certification Exam Project Management Case Studies, Fourth Edition is a valuable resource for students, as well as practicing engineers and managers, and can be used on its own or with the new Eleventh Edition of Harold Kerzner's landmark reference, Project Management: A Systems Approach to Planning, Scheduling, and Controlling. (PMP and Project Management Professional are registered marks of the Project Management Institute, Inc.)

This book is divided into four sections: invited papers, principles, systems and techniques. The invited papers form an extensive overview of the state-of-the-art of production management. The themes range from the everlasting hunt for better productivity to the implications of CIM architectures (particularly CIM-OSA) for production management. The other three sections of the book look at the various problems affecting production management. One of the characteristics of modern production management is the need for better principles, systems and techniques for interorganizational production management. Another topic of crucial relevance is the necessity to master not only repetitive manufacturing but also one-of-a-kind product manufacturing. From the managerial point of view, the forecast-based make-to-stock principles have proven insufficient, with market forces demanding fast and reliable deliveries of customer-oriented products. The goals of production management have been re-evaluated as a result.

Case Studies Thomas Telford

To meet and adapt to the current and future trends and issues in technology and society, the science committee of The German Academic Society for Production Engineering (WGP) continues to define future topics for production technology. These themes represent not only the key focus for the scientific work of the WGP, but also the central themes of the first annual conference in June 2011, whose paper is publically available in this volume. Such themes, including electric mobility, medical technology, lightweight construction, and resource efficiency, as well as mass production ability have all been identified as future, large-scale, and long-term drivers of change. Future trends influence changes sustainably and fundamentally; they permeate society, technology, economics, and value systems and have an effect in virtually all areas of life. The WGP has, as part of its research, established for itself the goal of not only observing these emerging changes, but also of supervising and influencing their development in order to ensure steady progress, secure sustainability, and shape the future.

Symposium on Skid Resistance 1962 John Wiley & Sons

"The primary object of this research is the investigation of means to reduce injury and death caused during automotive accidents. The high frequency of crashes make imperative the development of methods for most effectively decelerating the vehicle and properly packaging the occupants.

Equipment has been developed for the evaluation of the hydraulic shock-absorbing bumper and the seat belt assembly so essential in accomplishing these goals. Preliminary testing and modification of these devices is performed on the Project's machine for applying high-impact loads. In this machine a 2000 pound cart guided on a track is propelled by an air gun at speeds from twelve to forty miles per hour. It is stopped with programmed deceleration by the bumper. In relation to effective deceleration, the hydraulic shock-absorbing bumper may be designed to transmit those impact forces to the car rider on a seat belt which creates the least injury. These forces are determined by the rate of onset, the peak value, and the time of duration. Dummy and human tests to determine the effectiveness of seat belts in eliminating injury under this controlled deceleration are being carried on with this equipment. Final test and demonstration of the safety of these devices will be achieved by use of automotive vehicles especially modified for this purpose."--Synopsis.

This book presents recent results on fault diagnosis and condition monitoring of airborne electromechanical actuators, illustrating both algorithmic and hardware design solutions to enhance the reliability of onboard more electric aircraft. The book begins with an introduction to the current trends in the development of electrically powered actuation systems for aerospace applications. Practical examples are proposed to help present approaches to reliability, availability, maintainability and safety analysis of airborne equipment. The terminology and main strategies for fault diagnosis and condition monitoring are then reviewed. The core of the book focuses on the presentation of relevant case studies of fault diagnosis and monitoring design for airborne electromechanical actuators, using different techniques. The last part of the book is devoted to a summary of lessons learned and practical suggestions for the design of fault diagnosis solutions of complex airborne systems. The book is written with the idea of providing practical guidelines on the development of fault diagnosis and monitoring algorithms for airborne electromechanical actuators. It will be of interest to practitioners in aerospace, mechanical, electronic, reliability and systems engineering, as well as researchers and postgraduates interested in dynamical systems, automatic control and safety-critical systems. Advances in Industrial Control reports and encourages the transfer of technology in control engineering. The rapid development of control technology has an impact on all areas of the control discipline. The series offers an opportunity for researchers to present an extended exposition of new work in all aspects of industrial control.
