The majority of physicians are poorly knowledgeable about
 statistics and research design, yet are expected to do clinical
 research and write articles (if in academia) or, at the very least,

to read the literature critically and provide evidence-based care
 to patients. The basic skills involved are touched on very
 minimally in residency, but not in enough depth for an untrained
 investigator to successfully design or conduct a study, or analyze
 research findings in any meaningful way. This volume is intended
 as a "quick fix", allowing readers to look up information rapidly
 about various design types and statistical methods to see what
 the pros, cons, and indications for each are. Research
 implementation, including regulatory issues and grant writing, is
 also covered. The book is unique in physical medicine and
 rehabilitation, and with the increased emphasis on outcomes
 measurement and push toward a national agenda for disability
 research, will appeal both to investigators planning and executing
 studies and clinicians looking to better understand how the
 findings impact their practice. A list of topics with an outline of
 headings for each of the sections is attached.

Organizing Corporate and Other Business Enterprises is a one-volume treatise detailing the various aspects of setting up small business enterprises. Among the business entities discussed are individual proprietorships, general and limited partnerships, closely held corporations, not-for-profit corporations, and limited liability companies. It is intended for the attorney who is advising proposed or existing small businesses.
