*Commerce Business Daily* University of Pennsylvania Press

Developments in Maritime Transportation and Exploitation of Sea Resources covers recent developments in maritime transportation and exploitation of sea resources, encompassing ocean and coastal areas. The book brings together a selection of papers reflecting fundamental areas of recent research and development in the fields of:- Ship Hydrodynamics-

**USAF Supply Manual: Base procedures** Routledge

Few names are so closely connected with the cause of human rights as that of Mary Robinson. As former President of Ireland, she was ideally positioned for passionately and eloquently arguing the case for human rights around the world. Over five tumultuous years that included the tragic events of 9/11, she offered moral leadership and vision to the global human rights movement. This

volume is a unique account in Robinson's own words of her campaigns as United Nations High Commissioner for Human Rights. A Voice for Human Rights offers an edited collection of Robinson's public addresses, given between 1997 and 2002, when she served as High Commissioner. The book also provides the first in-depth account of the work of the Office of High Commissioner for Human Rights. With a foreword by Kofi Annan and an afterword by Louise Arbour, the current High Commissioner for Human Rights, the book will be of interest to all concerned with international human rights, international relations, development, and politics.

*The Soviet and Post-Soviet Review* CRC Press

Civil-military unity of effort has been an essential yet frustrating elusive requirement for success in post-cold-war peace operations. The need to coordinate, collaborate, and share information between civilian and military entities is on the rise and deemed essential requirements for success. Today's information and communications technologies serve to facilitate the exchange of information among the disparate players of peace operations but the ability to actually realize open information sharing in real-world coalition operations remains problematic. The integration of

relevant information and the timely dissemination of the processed information to interested parties in the field is well within the realities of today's technology. Increased civil-military involvement in peacekeeping and humanitarian operations around the world is matched in part by the rise in the number and complexity of these situations. There are many more actors on today's peace operations landscape with competing as well as common interests and expectations. The need to improve cooperation, coordination, and more open information sharing is on the rise. Efforts to improve and facilitate more open working together and information sharing among the disparate participants must overcome a continuing lack of trust among the civil-military actors, obsolete national and international policies, unrealistic legal and funding constraints, and outdated organization cultural traditions and behavior patterns. Additionally, all actors need to better understand each other and the roles they can and should play in an increasingly complex operational environment. In order to obtain closure and improve the future situation, the actors must develop relationships based on mutual trust, and there must be a clear understanding that cooperation, coordination, and information sharing is a two-way street. In reality, inefficiencies are

inherent in any multilateral activity, and competing interests and fear of loss of power and prestige make unity of effort a desired objective, but also one that will be difficult to achieve. Furthermore, information is power and can be an effective means to an end, but only if it can be interpreted, shared, and used effectively for military, political, or civil use. Information can also help reduce uncertainty and provide those that possess it a decided advantage in the decisionmaking process. There continues to be a general lack of trust among the players, coupled with the lack of a shared understanding of the added value through more open and improved information sharing. Information sharing among the actors on the peace operations landscape continues to be largely a manual process. These obstacles need to be recognized and, to the extent possible, practical recommendations developed for ameliorating them. Application of new technology must go beyond simply modernizing existing practices and capabilities. The civil-military community needs to look at new ways of doing business and how the rapidly advancing information technology can be used to leverage the power of information to help achieve timely and appropriate success of peace operations. The patterns of conflict for the post-cold-war environment are changing and so are the approaches to military command and control. Advances in information technology have enabled organizations and individuals to more effectively leverage the power of information; yet for coalition operations where information sharing is essential to meet mission needs, it continues to be problematic. The issue is not technology, but largely the will on the part of organizations and individuals to make it happen. There is also a number of policy, doctrine, C4ISR systems, cultural, and environmental challenges that influence the ability to achieve more open sharing of information in coalition operations.

**Conference Record** Médecins Sans Frontières

The gender-differentiated and more severe impacts of armed conflict upon women and girls are well recognised by the international community, as demonstrated by UN Security Council Resolution (UNSCR) 1325 on Women, Peace and Security and subsequent resolutions. Similarly, the development community has identified gender-differentiated impacts upon women and girls as a result of the effects of climate change. Current research and analysis has reached no consensus as to any causal relationship between climate change and armed conflict, but certain studies suggest an indirect linkage between climate change effects such as food insecurity and armed conflict. Little research has been conducted on the possible compounding effects that armed conflict and climate change might have on at-risk population groups such as women and girls. *Armed Conflict, Women and Climate Change* explores the intersection of these three areas and allows the reader to better understand how military organisations across the world need to be sensitive to these relationships to be most effective in civilian-centric operations in situations of humanitarian relief, peacekeeping and even armed conflict. This book examines strategy and military doctrine from NATO, the UK, US and Australia, and explores key issues such as displacement, food and energy insecurity, and male out-migration as well as current efforts to incorporate gender considerations in military activities and operations. This innovative book will be of great interest to students and scholars of international relations, international development, international security, sustainability, gender studies and law.

**FBIS Daily Report** Jason Aronson, Incorporated

The 'Violence against Kosovar Albanians NATO's intervention 1998-1999' case study describes the constraints and dilemmas facing Médecins Sans Frontières teams that witnessed a process of terror and expulsion which they described as the 'deportation' of Kosovar Albanians by Serb forces. It also described MSF's reaction to NATO aerial bombings and the control exercised over the refugee camps by this party to the conflict. Should MSF denounce the violence being committed against Kosovars at the risk of being excluded from access to these people and of encouraging the NATO intervention? Should MSF take a stance on the NATO intervention? What sort of relationship should be established with countries that were committed either militarily (such as NATO members) or politically (Greece) in the conflict and their civil societies? Should MSF raise the alarm about the absence of the UNHCR in the management of the refugee camps, at the risk of reinforcing this marginalization? Is it justifiable to carry out an assessment mission that sacrifices the principle of operational independence, by invoking an interpretation of the principle of impartiality that implies a responsibility to assist victims on both sides of a conflict? *Federal Register* Georgetown University Press

The phrase "lessons learned is such a common one, yet people struggle with developing effective lessons learned approaches. The *Lessons Learned Handbook* is written for the project manager, quality manager or senior manager trying to put in place a system for learning from experience, or looking to improve the system they have. Based on experience of successful and unsuccessful systems, the author recognises the need to convert learning into action. For this to happen, there needs to be a series of key steps, which the book guides the reader through. The book provides practical guidance to learning from experience, illustrated with case histories from the author, and from contributors from industry and the public sector. The book is a practitioner-level guide to the design and the mechanics of lessons learned processes Takes a holistic approach, tracking lessons from identification to reapplication Makes the case for the assignment of actions for learning *Daily Labor Report* Rowman & Littlefield

At a time when greater transparency is needed, this book advances a novel explanation of America's efforts to advance greater transparency in international relations. Marquardt argues that American statesmen have long sought to secure an American-dominated international system to encourage states to be more open and forthcoming about their internal affairs. Yet the United States routinely uses its calls for military transparency in particular as a policy instrument to discipline its rivals and therefore paradoxically contributes to greater tension in international relations. In contrast to conventional thinking about transparency in relation to overcoming power politics and promoting international cooperation, this book explores the relationship between America's power and international security competition. Though analytically distinct, openness and transparency have served the same strategic goal; ensuring America's position of preponderance in the international system.

*Railway Review* Routledge

This book explores how culture shapes foreign economic policy in post-Soviet states. Taking a constructivist approach, Andrei P. Tsygankov argues that after the Soviet empire disintegrated, the strength of new nations' national identity shaped their decision whether to direct their economic activities inward toward Russia or outward toward Europe. Drawing on detailed case studies of Latvia, Ukraine, and Belarus, the author demonstrates how the stronger the identity, the more

likely the new state was to shift away from the empire. Employing a range of both qualitative and quantitative analysis, this study brings a national identity perspective into the forefront of international political economy theory.

*Intelligence* Elsevier

A product of the Committee on Foreign Affairs of the US House of Representatives, this text studies the emergence of a more unified Europe as an economic and political power, and the implications of European integration for the United States. *Hearings Before and Special Reports Made by Committee on Armed Services of the House of Representatives on Subjects Affecting the Naval and Military Establishments* Ashgate Publishing, Ltd.

The Congressional Record is the official record of the proceedings and debates of the United States Congress. It is published daily when Congress is in session. The Congressional Record began publication in 1873. Debates for sessions prior to 1873 are recorded in *The Debates and Proceedings in the Congress of the United States (1789-1824)*, the *Register of Debates in Congress (1824-1837)*, and the *Congressional Globe (1833-1873)*

**Monthly Catalogue, United States Public Documents** Jeffrey Frank Jones

This fifth edition in the International Engagement on Cyber series focuses on securing critical infrastructure. The centrality of critical infrastructure in the Obama administration's recent cybersecurity initiatives demonstrates the timeliness of this topic for greater review and scholarly input. In this manner, articles in this issue uncover the role and extent of international law and norms, public-private cooperation, as well as novel ways of conceptualizing 'security' in efforts to improve critical infrastructure cybersecurity. Other pieces provide case studies on the telecommunications, power, and energy sectors to generate an in-depth understanding of specific responses to security concerns in different infrastructure areas. Additional contributions examine regulatory activities in cyberspace, the potential value of cryptocurrency, the evolution of cloud computing, cybersecurity in Brazil, as well as the integration of cyber in the military strategies of Russia, China, and the United States. The diversity of these topics demonstrates the Journal's continued commitment to pursuing the myriad facets that compromise the field of cyber. Please note, this special issue is not included in the subscription to the journal.

*Pathways After Empire*

Established psychoanalytic/psychodynamic researchers and theorists bring the exploration of prejudice to a new level by examining how psychoanalysis might elucidate strategies that will eliminate prejudice.
