Nursing Research: Designs and Methods E-Book Saunders

Research Methods for Nursing and Healthcare is an essential introductory text for all nursing and healthcare students coming to research methods for the first time or those nurses and healthcare staff wishing to improve their skills in this area. The book includes comprehensive coverage of the main research methods topics, and provides guidance on how to understand and apply research techniques. Everyday nursing examples are used throughout to explain research methods concepts and their relevance to practice. Simple self-assessment tasks are included at the end of chapters; the tests can be undertaken individually, or within groups, to assess the student's understanding of the concepts and skills being learnt. Research Methods for Nursing and Healthcare takes the fear out of research methods for all nursing and healthcare professionals. Excellent introductory text that brings interest to research methods for student nurses. Dr Aimee Aubeeluck, Deputy Director: Graduate Entry Nursing, School of Nursing, Midwifery and Physiotherapy University of Nottingham "I think this is one of the most readable books on research I have read. Not the most scholarly, but that was not the intention. It is certainly the most user friendly book that will make the whole, often scary, subject of research less threatening." Paula Crick, Principal Lecturer, Faculty of Health, Staffordshire University "I do think this is one of the most engaging texts aimed at nursing that I

have read in a while... This does seem much more exciting and more importantly. 'real world'" Lucy Land, Senior Academic, Centre for Health and Social Care Research Faculty of Health Birmingham City University "Useful resource for our students dissertation which can be a literature review or a research proposal"Melanie Brooke-Read, Department of Health & Social Studies, University of Bedfordshire "Excellent text book which actually takes away the 'fear' of research within healthcare" Angela Cobbold, Institute of Health & Social Care, Anglia Ruskin University "The text is very comprehensive and I found chapter 7 on action research particularly useful in supporting a student I was supervising. I also like the self assessment exercises which I intend to incorporate in my teaching strategy." Ms. Mulcahy, School of Nursing and Midwifery, University College Cork.

Study Guide for Understanding Nursing Research E-Book Mosby Incorporated

"This textbook explicitly links understanding of nursing research with evidence-based practice, and focuses on how to read, critique, and utilize research reports. Organized around questions students have when reading reports--how the conclusions were reached, what types of patients the conclusions apply to, how the study was done, and why it was done that way--the text explains the steps of the research process to answer these questions"--Résumé de l'éditeur.

Results are presented of a study of nursing and nursing education that focused on the need for continued federal support of nursing education, ways to attract nurses to medically underserved areas, and approaches to encourage nurses to stay in the profession. Findings are presented on whether the aggregate supply of generalist nurses will be sufficient to meet future demand, and how changes that could occur in the health care system might affect demand. Attention is also directed to: how the current and future supply of nurses may be influenced by the costs of nursing education and the sources of education financing; and education for generalist positions in nursing. In addition, the supply and demand situation for nurses educationally prepared for advanced professional positions in nursing is examined. The influence of employer policies and practices in utilization of nursing resources on demand and supply is also addressed. Finally, areas in which further data and studies are needed to better monitor nursing supply and demand are identified. In addition to 21 recommendations, appendices include information on Nursing Training Act appropriations, state reports on nursing issues, certificates for specialist registered nurses, projections of registered nurse supply and requirements, and doctoral programs in nursing.
