LIVINGSTON REBEKAH

Research in Education Cambridge University Press
Present Your Research to the World! The World Congress 2009 on Medical Physics and Biomedical Engineering – the triennial scientific meeting of the IUPESM - is the world's leading forum for presenting the results of current scientific work in health-related physics and technologies to an international audience. With more than 2,800 presentations it will be the biggest conference in the fields of Medical Physics and Biomedical Engineering in 2009! Medical physics, biomedical engineering and bioengineering have

been driving forces of innovation and progress in medicine and healthcare over the past two decades. As new key technologies arise with significant potential to open new options in diagnostics and therapeutics, it is a multidisciplinary task to evaluate their benefit for medicine and healthcare with respect to the quality of performance and therapeutic output. Covering key aspects such as information and communication technologies, micro- and nanosystems, optics and biotechnology, the congress will serve as an inter- and multidisciplinary platform that brings together people from basic research, R&D, industry and medical application to discuss these issues. As a major event for science, medicine and technology the congress provides a comprehensive overview and in-depth, first-hand information on new developments, advanced technologies and current and future

applications. With this Final Program we would like to give you an overview of the dimension of the congress and invite you to join us in Munich! Olaf Dössel Congress President Wolfgang C.

This book presents the physical science experiments in a space microgravity environment conducted on board the SJ-10 recoverable satellite, which was launched on April 6th, 2016 and recovered on April 18th, 2016. The experiments described were selected from ~100 proposals from various institutions in China and around the world, and have never previously been conducted in the respective fields. They involve fluid physics and materials science, and primarily investigate the kinetic properties of matter in a space microgravity environment. The book provides a comprehensive review of these experiments, as well as the mission's execution, data collection, and scientific outcomes.

Annual of the University of Deseret Springer Nature

In Proving Grounds, Scott Kirsch traces the rise and fall of this astonishing cold war initiative. He examines the work that went into making "geographical engineering" or "earthmoving" an imminent possibility as well as the public controversy, scientific uncertainty, and political opposition that kept it--with the exception of several massive craters in the Nevada desert--out of the landscape.

Educational change and reform on a larger scale Bourdieu for Educators: Policy and Practice, brings the revolutionary research and thinking of Pierre Bourdieu (1930[en]2002) of France to public educational leaders in North America, Canada, Australia, and the U.K. This text brings Bourdieu's corpus into the arena of elementary and secondary educational reform and change, and offers policy, research, and practice discussions. Authors Fenwick W. English and Cheryl L. Bolton use Bourdieu to challenge the standards movement in different countries, the current vision of effective management, and the open market notion connecting pay to performance. The text shows that connecting pay to performance won't improve education for the poorest group of school students in the U.S., Canada, or the U.K., regardless of how much money is spent trying to erase the achievement gap. The authors layout the bold educational agenda of Pierre Bourdieu by demonstrating that educational preparation must take into account larger socioeconomic-political realities in order for educational change and reform to make an impact.

The Program Manager for Assembled Chemical Weapons Assessment (PMACWA) of the Department of Defense (DOD) requested the National Research Council (NRC) to assess the engineering design studies (EDSs) developed by Parsons/Honeywell and General Atomics for a chemical demilitarization facility to completely dispose of the assembled

chemical weapons at the Pueblo Chemical Depot in Pueblo, Colorado. To accomplish the task, the NRC formed the Committee on Review and Evaluation of Alternative Technologies for Demilitarization of Assembled Chemical Weapons: Phase II (ACW II Committee). This report presents the results of the committee's scientific and technical assessment, which will assist the Office of the Secretary of Defense in selecting the technology package for destroying the chemical munitions at Pueblo. The committee evaluated the engineering design packages proposed by the technology providers and the associated experimental studies that were performed to validate unproven unit operations. A significant part of the testing program involved expanding the technology base for the hydrolysis of energetic materials associated with assembled weapons. This process was a concern expressed by the Committee on Review and Evaluation of Alternative Technologies for Demilitarization of Assembled Chemical Weapons (ACW I Committee) in its original report in 1999 (NRC, 1999). The present study took place as the experimental studies were in progress. In some cases, tests for some of the supporting unit operations were not completed in time for the committee to incorporate results into its evaluation. In those cases, the committee identified and discussed potential problem areas in these operations. Based on its expertise and its aggressive data-gathering activities, the committee was able to conduct a comprehensive review of the test data that had been completed for the overall system design. This report summarizes the study.

THE CHEMICAL NEWS AND JOURNAL OF PHYSICAL SCIENCE.

This latest Fifth Assessment Report of the Intergovernmental Panel on Climate Change (IPCC) will again form the standard scientific reference for all those concerned with climate change and its consequences, including students and researchers in environmental science, meteorology, climatology, biology, ecology and atmospheric chemistry. It provides invaluable material for decision makers and stakeholders: international, national, local; and in all branches: government, businesses, and NGOs. This volume provides:

- An authoritative and unbiased overview of the physical science basis of climate change
- A more extensive assessment of changes observed throughout the climate system than ever before
- New dedicated chapters on sea-level change, biogeochemical cycles, clouds and aerosols, and regional climate phenomena
- A more extensive coverage of model projections, both near-term and long-term climate projections
- A detailed assessment of climate change observations, modelling, and attribution for every continent
- A new comprehensive atlas of global and regional climate projections for 35 regions of the world
