A staggering 98% of all private-sector businesses in the U.S. are small businesses. With very few exceptions, these employers are required to purchase workers' compensation insurance. For many, the cost of providing that coverage takes a significant bite out of their company's profits. Unfortunately, resources that are specifically targeted to assist small businesses reduce their workers' compensation costs are nearly non-

existent. As a result, the overwhelming majority of small business employers learn how to manage their workers' compensation costs through years of trial and error.

Unfortunately, they pay for those errors through much higher than necessary workers' compensation premiums. CHOMP COMP is written specifically to small businesses owners and managers and is intended to be used as a resource and guide. Although CHOMP COMP assumes that the reader knows nothing about workers' compensation insurance, it does not delve into impractical timelines explaining the evolution of workers' compensation insurance. Nor does it

list specific details about workers; compensation legislation that are bound to change within months of the book's publication. Instead, CHOMP COMP provides practical information to help small business employers understand workers; compensation insurance and the factors that influence premiums. From there, it tackles the those factors one after another. The authors have taken great effort to present the material in an easy to-read format and have intentionally limited the length of the chapters to enable small business employers to read and digest chapters in the spare 15 to 20 minutes they can carve out of their busy schedules. The HCR (Harvest Cost-Revenue) Estimator is engineering and financial analysis software used to evaluate stand-level financial thresholds for harvesting small diameter ponderosa pine (*Pinus ponderosa* Dougl. ex Laws.) in the Southwest United States. The Windows-based program helps contractors and planners to identify costs associated with tree selection, residual handling, transportation of raw materials, and equipment used. Costs are compared against total financial return for regionally based market opportunities to arrive at potential net profit. Information is used to identify per-acre cost thresholds, for contract appraisal,

and for prioritizing project planning for wildfire fuel reduction treatments and forest restoration efforts.

 The workplace is where 156 million working adults in the United States spend many waking hours, and it has a profound influence on health and well-being. Although some occupations and

work-related activities are more hazardous than others and face higher rates of injuries, illness, disease, and fatalities, workers in all occupations face some form of work-related safety and health concerns.

Understanding those risks to prevent injury, illness, or even fatal incidents is an important function of society. Occupational safety and health (OSH) surveillance provides the data and analyses needed to understand the relationships between work and injuries and illnesses in order to improve worker safety and health and prevent work-related injuries and illnesses.

Information about the circumstances in which workers are injured or made ill on the job and

how these patterns change over time is essential to develop effective prevention programs and target future research. The nation needs a robust OSH surveillance system to provide this critical information for informing policy development, guiding educational and regulatory activities, developing safer technologies, and enabling research and prevention strategies that serves and protects all workers. A Smarter National Surveillance System for Occupational Safety and Health in the 21st Century provides a comprehensive assessment of the state of OSH surveillance. This report is intended to be useful to federal and state agencies that

have an interest in occupational safety and health, but may also be of interest broadly to employers, labor unions and other worker advocacy organizations, the workers' compensation insurance industry, as well as state epidemiologists, academic researchers, and the broader public health community. The recommendations address the strengths and weaknesses of the envisioned system relative to the status quo and both short- and long-term actions and strategies needed to bring about a progressive evolution of the current system.
