Thorough and

accessible, this professional resource and text shows how the latest research in adolescent literacy can be translated into effective practice in middle and high school classrooms. Leading authorities discuss findings on the adolescent learner, addressing such essential topics as comprehension, content-area literacy, differentiated instruction, gender differences in literacy learning, and English language learners. With a focus on evidence-based methods, coverage ranges from techniques for building digital literacy and comprehension skills to strategies for flexible grouping and writing instruction. Ideal for courses in adolescent

literacy, each chapter includes guiding questions, discussion questions, and classroom examples. I Read It, But I Don't Get it Smithsonian This book offers an interdisciplinary view of the biophysical issues related to climate change. Climate change is a phenomenon by which the long-term averages of weather events (i.e. temperature, precipitation, wind speed, etc.) that define the climate of a region are not constant but change over time. There have been a series of past periods of climatic change, registered in historical or paleoecological records. In the first section of this book, a series of state-of-the-art research projects explore the biophysical

causes for climate change and the techniques currently being used and developed for its detection in several regions of the world. The second section of the book explores the effects that have been reported already on the flora and fauna in different ecosystems around the globe. Among them, the ecosystems and landscapes in arctic and alpine regions are expected to be among the most affected by the change in climate, as they will suffer the more intense changes. The final section of this book explores in detail those issues.

The Handbook provides a detailed evaluation of what can realistically be achieved by remote sensing in an operational coastal management context. It takes the user through the planning and implementation of remote sensing projects from the setting of realistic objectives, deciding which imagery will be most appropriate to achieve those objectives, the acquisition, geometric and radiometric correction of imagery, the field survey methods needed to ground-truth the imagery and guide image classification, the image processing

techniques required to optimise outputs, through the image interpretation and evaluation of the accuracy of outputs. Linked to the Handbook is a computer-based remote sensing distance-learning module: Applications of satellite and airborne image data to coastal management available free of charge via [www.unesco.bilko.org](http://www.unesco.bilko.org)

This thorough and detailed exposition is the result of an intensive month-long course on mirror symmetry sponsored by the Clay Mathematics Institute. It develops mirror symmetry from both mathematical and physical perspectives with the aim of

furthering interaction between the two fields. The material will be particularly useful for mathematicians and physicists who wish to advance their understanding across both disciplines. Mirror symmetry is a phenomenon arising in string theory in which two very different manifolds give rise to equivalent physics. Such a correspondence has significant mathematical consequences, the most familiar of which involves the enumeration of holomorphic curves inside complex manifolds by solving differential equations obtained from a ``mirror" geometry. The inclusion of D-brane states in the equivalence has led to further conjectures

involving calibrated submanifolds of the mirror pairs and new (conjectural) invariants of complex manifolds: the Gopakumar-Vafa invariants. This book gives a single, cohesive treatment of mirror symmetry. Parts 1 and 2 develop the necessary mathematical and physical background from "scratch". The treatment is focused, developing only the material most necessary for the task. In Parts 3 and 4 the physical and mathematical proofs of mirror symmetry are given. From the physics side, this means demonstrating that two different physical theories give isomorphic physics. Each physical theory can be described geometrically, and thus

mirror symmetry gives rise to a "pairing" of geometries. The proof involves applying  $\mathbb{R} \leftarrow \mathbb{R}$  circle duality to the phases of the fields in the gauged linear sigma model. The mathematics proof develops Gromov-Witten theory in the algebraic setting, beginning with the moduli spaces of curves and maps, and uses localization techniques to show that certain hypergeometric functions encode the Gromov-Witten invariants in genus zero, as is predicted by mirror symmetry. Part 5 is devoted to advanced topics. This one-of-a-kind book is suitable for graduate students and research mathematicians interested in

mathematics and mathematical and theoretical physics. *On the Trail of the Ice Age Floods* Cambridge University Press  
Design Discourse: Composing and Revising Programs in Professional and Technical Writing addresses the complexities of developing professional and technical writing programs. The essays in the collection offer reflections on efforts to bridge two cultures—what the editors characterize as the “art and science of writing”—often by addressing explicitly the tensions between them. Design Discourse offers insights into the high-stakes decisions made by program designers as they seek to

“function at the intersection of the practical and the abstract, the human and the technical.”

Dr. Attila Toth's thirty years as a practicing infertility specialist and pathologist have convinced him that the only explanation for the alarming infertility rate, so far out of proportion with natural law, is the increasing presence of contaminating bacteria in the genital tracts of both sexes. In *Fertility vs. Infertility*, he documents how and why this process has escalated so dramatically over the past few decades of increased sexual activity.

Yoga Journal Unesco Accessible and user-friendly, this volume presents evidence-based practices for integrating language and literacy knowledge to enhance children's learning in today's

standards-based classrooms. While grounded in theory and research, the book focuses on day-to-day concerns in instruction and intervention, identifying models for effective collaboration among speech-language pathologists, general and special educators, and reading specialists. Chapters cover a range of approaches for targeting core areas of literacy--word recognition, reading comprehension, writing, and spelling--with particular attention to working with students with language learning difficulties.

Across an amazing sweep of the critical areas of business regulation - from

contract, intellectual property and corporations law, to trade, telecommunications, labour standards, drugs, food, transport and environment - this book confronts the question of how the regulation of business has shifted from national to global institutions. Based on interviews with 500 international leaders in business and government, this book examines the role played by global institutions such as the WTO, the OECD, IMF, Moody's and the World Bank, as well as various NGOs and significant individuals. The authors argue that effective and decent global regulation depends on the determination of individuals to engage

with powerful agendas and decision-making bodies that would otherwise be dominated by concentrated economic interests. This book will become a standard reference for readers in business, law, politics and international relations.

Language teaching material using authentic film and television is motivating and fun. However, teachers are often unsure of how to use this material in their language classroom. Using Authentic Video in the Language Classroom guides and supports teachers with practical suggestions for activities which can be used with films, drama, soap operas, comedy, sports programmes, documentaries and adverts. Video is a rich renewable resource which can be used in the classroom to refresh conventional textbook material. These activities can be used time and time again with new

material to stimulate students and bring the language alive. Many of the activities would also lend themselves for use with other technologies such as DVDs and Webcasts. It enables teachers to access the powerful teaching tool of video with successful activities for the language classroom.
