Risk Modeling, Assessment, and Management Elsevier

Explores some of the meaning and implications of modern life through the deep reading of significant books. Waxler argues that we need "fiction" to give our so-called "real life" meaning

Natech Risk Assessment and Management John Wiley & Sons

Risk is always present; only the probabilities of risk vary. Communities of Fate offers an opportunity to deepen our understanding of the social origins and organization of risk. By emphasizing the social aspects of risk and illustrating the range of circumstances in which risk is not only socially defined but socially created, the author helps demonstrate the extent to which reducing risk is not a technical problem, but, within Habermas' framework, a practical one. In short, how do we encourage all people, including those predisposed to technical solutions, to

appreciate the extent to which risk is socially constructed and, thus, to join the socio-political struggle to reduce it where that is possible? Contents: Introduction; Theoretical Frameworks-The Classical Statements; Theoretical Frameworks-The Contemporary Statements; Empirical Case Studies of Risk; Policy Implications.

Risk Criticism is a study of literary and cultural responses to global environmental risk in an age of unfolding ecological catastrophe. In 2015, the Bulletin of the Atomic Scientists reset its iconic Doomsday Clock to three minutes to midnight, as close to the apocalypse as it has been since 1953. What pushed its hands was not just the threat of nuclear weapons, but also other global environmental risks that the Bulletin judged to have risen to the scale of the nuclear, including climate change and innovations in the life sciences. If we may once have believed that the end of days would come in a blaze of nuclear firestorm, we now suspect that the apocalypse may be much slower, creeping in as chemical toxins, climate change, or nano-technologies run amok. Taking inspiration from the questions raised by the Bulletin's synecdochical "nuclear," Risk

Criticism aims to generate a hybrid form of critical practice that brings "nuclear criticism" into conversation with ecocriticism. Through readings of novels, films, theater, poetry, visual art, websites, news reports, and essays, Risk Criticism tracks the diverse ways in which environmental risks are understood and represented today.

The Risk of Reading Penguin

This booklet takes portfolio design beyond the familiar "black box" mean-variance framework. Most importantly, the short-term volatility of financial assets, commonly measured as standard deviation, is a highly imperfect measure of the actual long-horizon perils faced by real-world investors subject to the vagaries of financial and military history. These risks have names--inflation, deflation, confiscation, and devastation--and any useful discussion of portfolio design of necessity incorporates their probabilities, consequences, and costs of mitigation ... This booklet

contains ... with luck, a framework within income and all-equity portfolios. This booklet contains ... with luck, a framework within which to think more clearly about risk. Note: the entire Investing for Adults series is not for beginners.

The wildland fire community has spent the past decade trying to understand and account for the role of human factors in wildland fire organizations. Social research that is relevant to managing fire organizations can be found in disciplines such as social psychology, management, and communication. However, such research has been published primarily for scientific and business audiences, and much of the fire community has not been exposed to it. Here, we have compiled and organized knowledge from a variety of social science disciplines so that it can be used to improve organizational practices related to firefighter and public safety, to assess the effectiveness of safety campaigns, and to improve firefighter safety trainings. This annotated reading list summarizes approximately 270 books, articles, and online resources that address scientific and management concepts helpful for understanding the human side of fire management. The first section, Human Factors and Firefighting, introduces readers to key workshops and writings that led to the recognition that human factors are prime ingredients of firefighter safety. The second section, Foundations for Understanding Organizations, consists of social science research that provides a foundation for understanding organizational dynamics. This section includes readings on decision making and sensemaking, organizational culture, identification and identity, leadership and change, organizational learning, and teams and crews. The third section, Understanding Organizations in High Risk Contexts, explores organizations that deal regularly with risk, uncertainty and crisis. This section includes readings on risk and uncertainty, high reliability organizing, and crisis communication. The publication concludes with Internet resources available for those interested in the management of fire organizations.

A new eye-opener on how we can make better decisions—by the author of Gut Feelings In this age of big data we often trust that expert analysis—whether it’s about next year’s stock market or a person’s risk of getting cancer—is accurate. But, as risk expert Gerd Gigerenzer reveals in his latest book, Risk Savvy, most of us, including doctors, lawyers, and financial advisors, often misunderstand statistics, leaving us misinformed and vulnerable to exploitation. Yet there’s hope. In Risk Savvy, Gigerenzer gives us an essential guide to the science of good decision making, showing how ordinary people can make better decisions for their money, their health, and their families. Here, Gigerenzer delivers the surprising conclusion that the best results often come from considering less information and listening to your gut.

While most children learn to read fairly well, there remain many young Americans whose futures are imperiled because they do not read well enough to meet the demands of our competitive, technology-driven society. This book explores the problem within the context of social, historical, cultural, and biological factors. Recommendations address the identification of groups of children at risk, effective instruction for the preschool and early grades, effective approaches to dialects and bilingualism, the importance of these findings for the professional development of teachers, and gaps that remain in our understanding of how children learn to read. Implications for parents, teachers, schools, communities, the media, and government at all levels are discussed. The book examines the epidemiology of reading problems and introduces the concepts used by experts in the field. In a clear and readable narrative, word identification, comprehension, and other processes in normal reading development are discussed. Against the background of normal progress, Preventing Reading Difficulties in Young Children examines factors that put children at risk of poor reading. It explores in detail how literacy can be fostered from birth through

kindergarten and the primary grades, including evaluation of philosophies, systems, and materials commonly used to teach reading.

“Read Jack Ablin’s ‘five factor’ approach to investing and you not only will sleep better at night, you’ll be a smarter, wiser human being. Ablin takes you on his twenty-year journey toward a unified, rational approach to investing that can help you weather even the most turbulent financial storms. This book may be one of the best investments you will ever make.” --John Callaway, Senior Correspondent, WTTW, Public Television “This book is based on verifiable data trends and years of experience with a broad array of economic and market numbers. Regret over investment losses need not lead investors to disengage their brains or to be robbed again by schemes hawked as ‘new and improved.’ Reading Minds and Markets will help jump-start an honest investment dialogue that has been sidetracked by excesses of greed and fear.” --Bill Barnhart, Former Financial Editor and Columnist for the Chicago Tribune “The author has taken the complex world of investing and provided an extremely practical approach to success where others have failed miserably. His grasp of the financial markets makes him eminently qualified to develop an extremely sound and practical approach in order to protect and enhance wealth for investors.” --Edward (“Ned”) Riley, Jr., Former Chief Investment Officer for State Street Global Advisors and Chief Investment Officer, Riley Asset Management “With nearly three decades of experience, Jack Ablin’s superb intellectual thinking is reflected in Reading Minds and Markets. This is great reading for the motivated investor.” --Professor Israel Shaked, Finance and Economics Department, Boston University, School of Management You can do more to protect yourself from market risks and down markets. The secret: Understand the big picture and know when to shift money toward more promising industry groups, sectors, or asset classes. This strategy is called “global macro investing”--and, as Chief Investment Officer for Harris Private Bank, Jack Ablin has used it to deliver results for many of the world’s wealthiest families and individuals. In Reading Minds and Markets, Ablin distills his techniques into a remarkably simple, commonsense five-step plan that any investor can use. You’ll discover how to anticipate some of the more significant shifts in global markets and move investments toward areas that are more likely to grow. Equally important, you’ll learn how to overcome bad habits that inevitably lead to failure--habits all too often reinforced by the financial media. In today’s unforgiving markets, you need to make smarter high-level decisions and fewer mistakes: This book will help you do both. Why you must take a top-down view of the market--and how to do it Avoid getting caught off-guard in choppy, highly volatile markets Respond to the market’s powerful signals about relative risk Master strategies for improving return without increasing risk Discover the five factors that consistently tell you where to invest Cut through the clutter of irrelevant data: find what matters and use it Stop being your own worst enemy Overcome the #1 obstacle to structuring your best portfolio: human nature www.readingmindsandmarkets.com

Against the Tide Alexandria, Va. : Association for Supervision and Curriculum Development Organized according to the Reading First categories of reading development and instruction as presented in the report of the National Reading Panel, this exciting and timely new text presents teaching strategies for children at-risk, including children of poverty, children for whom English is not their primary language, and children with learning and behavioral disabilities. These are the children No Child Left Behind challenges teachers to serve more effectively. The book is more than a list of teaching strategies that are scientifically-validated; the scientifically-validated practices included are integrated into a systematic teaching process that stresses the use of student outcome data within authentic classroom contexts to guide practice. The teaching strategies have been field tested with at-risk children in both rural and urban teaching settings. Most of the strategies have resulted from work the authors did in their recent four-year federally-funded model-demonstration grant in which they have implemented an extensive reading problem prevention model in grades K-3 in three inner-city schools. Thus, the teaching strategies in the book are ones that the authors implemented every day with at-risk children, not just findings from research articles. Features of this First Edition Include: Content organized around the five components validated by the National Reading Panel: phonemic awareness, phonics, fluency, vocabulary, and comprehension. Readers learn how to use DIBELS and other curriculum-based assessment results for early identification of children at risk of reading failure and to monitor student progress. A unique feature is using DIBELS assessments to pinpoint student skill development as they acquire alphabetic principle. Accompanying DVD shows teacher explicitly

teaching letter sound recognition, regular word decoding, sight words, multisyllable word reading, passage reading, vocabulary, and comprehension. Text explains how to use Differentiated Instruction to maximize learning for all students. Specific strategies are detailed for implementing Response To Intervention (RTI) multi-tier instruction during the reading block. Examines building vocabulary knowledge through direct and indirect teaching strategies. Comprehension strategies identified by the National Reading Panel that help students derive meaning from text are emphasized. Strategies for individualizing instruction for adolescents and children who are bilingual and/or ESL are included within each chapter. Effective strategies for managing classroom behavior, including instruction groups are provided so that student behavior does not interfere with reading instruction.
