BRONSON LEE

Proceedings of the ... Congress of the International Council of the Aeronautical Sciences Springer Science & Business Media
 Cet ouvrage donne toutes les clés aux enseignant(e)s pour faire réussir leurs élèves dans l'apprentissage des mathématiques dès l'entrée au CP. Il se centre sur la description des points fondamentaux qui sont souvent sources de difficulté pour les élèves : Le calcul, c'est-à-dire la construction du nombre et le sens des opérations ; La résolution de problèmes, c'est-à-dire la mise en place de stratégies efficaces. Il présente les principes mathématiques sur lesquels reposent les démarches proposées et propose une mise en application de ces principes au travers de 32 activités-types conçues comme des fiches de préparation. Il défend quelques idées simples sur le plan des mathématiques : Les élèves peuvent commencer à apprendre à calculer avant de maîtriser le symbolisme mathématique des égalités et des opérations ; cet apprentissage participe à la construction du nombre. La résolution de problèmes prend davantage de sens aux yeux des élèves si elle commence par l'utilisation de matériel manipulable avant de s'orienter vers une résolution par la modélisation. Les compétences en calcul favorisent les compétences en résolution de problèmes qui elles-mêmes participent à la construction du sens des opérations. Il comporte 2 grandes parties : La partie 1 présente les principes sur lesquels repose la démarche proposée. La partie 2 propose une mise en application de ces principes, d'abord dans le domaine du calcul, puis dans le domaine de la résolution de problèmes. Elle présente 33 « activités-types ». Un fil rouge traverse l'ensemble de ces activités : « Le jeu de la fleur ». Il est utilisable du CP au CE2 en jouant sur ses différentes variables.
Information Market Guide CRC Press
 This is a collection of research papers published in various mathematical journals by friends, colleagues and former students of Professor Buchin Su in honor of his 80th birthday and 50th year of educational work. Professor Su was born in 1902 in Pingyang County, Zhejiang Province, People's Republic of China. He received the degree of Bachelor of Science in mathematics from Tohoku University, Sendai, Japan in 1927, and the degree of Doctor of Science from the same university in 1931. After returning to Chinain 1931, he first taught at Zhejiang University in Hangzhou until 1952 when the whole College of Science of Zhejiang University was merged into Fudan University in Shanghai. During his 50 years of educational work besides teaching, he also has taken up various administrative positions serving as Chairman,

Dean, Vice President and finally the President of Fudan University in 1978. Contents: Geometrical Class and Degree for Surfaces in Three-space (T Banckoff & N H Kuiper)CK-submanifolds of a Complex Space Form (A Bejancu, M Kon & K Yano)On the Minima of Yang-Mills Functionals (C Gu)A Generalization of a Theorem of Delaunay (W Y Hsiang & W C Yu)On the Static Solutions of Massive Yang-Mills Equations (H Hu)Limit Behaviors of Solutions for some Parabolic Equations of Higher Order and their Applications to the Optimal Control (D Li)A Note on the Approximate Solution of the Cauchy Problem by Number-theoretic Nets (Y Wang)On Infinite Galois Theory for Division Rings (Y Xu)Division Algebras and Fib rations of Spheres by Great Spheres (C T Yang)Qualitative Theory of the Quadratic Systems in the Complex Space (Y Ye)On a p-increasing Family of Point-to-set Maps (M Yue)and other papers Readership: Mathematicians.

 Le calcul mental consiste à effectuer des calculs sans autre support que la réflexion et la mémoire. Dans ce cahier nous proposons des exercices de calcul mental (1000 opérations d'addition + 1000 opérations de soustraction) pour aider votre enfant à développer sa concentration et sa faculté à calculer de tête. Description du produit : 105 pages : 1000 opérations d'addition + 1000 opérations de soustraction Format : 21,6 x 27,9 cm (8,5 x 11 pouces) Papier et impression haute qualité Couverture souple et brillante Tranche d'âges : 5-6 ans Fabriqué en France

 An inventory of information products and services available on the European Information Services Market. Points out the differences/advantages of the online database compared to the printed version which is in front of you.
Design of Structures in Composite Materials (basic Data and Interdisciplinary Action) World Scientific
 Energy and power are fundamental concepts in electromagnetism and circuit theory, as well as in optics, signal processing, power engineering, electrical machines, and power electronics. However, in crossing the disciplinary borders, we encounter understanding difficulties due to (1) the many possible mathematical representations of the same physical objects, and (2) the many possible physical interpretations of the same mathematical entities. The monograph proposes a quantum and a relativistic approach to electromagnetic power theory that is based on recent advances in physics and mathematics. The book takes a fresh look at old debates related to the significance of the Poynting

theorem and the interpretation of reactive power. Reformulated in the mathematical language of geometric algebra, the new expression of electromagnetic power reflects the laws of conservation of energy-momentum in fields and circuits. The monograph offers a mathematically consistent and a physically coherent interpretation of the power concept and of the mechanism of power transmission at the subatomic (mesoscopic) level. The monograph proves (paraphrasing Heaviside) that there is no finality in the development of a vibrant discipline: power theory.

'96 Electroweak Interactions and Unified Theories DIANE Publishing

This book traces the life of Cholesky (1875-1918), and gives his family history. After an introduction to topography, an English translation of an unpublished paper by him where he explained his method for linear systems is given, studied and replaced in its historical context. His other works, including two books, are also described as well as his involvement in teaching at a superior school by correspondence. The story of this school and its founder, Léon Eyrolles, are addressed. Then, an important unpublished book of Cholesky on graphical calculation is analyzed in detail and compared to similar contemporary publications. The biography of Ernest Benoit, who wrote the first paper where Cholesky's method is explained, is provided. Various documents, highlighting the life and the personality of Cholesky, end the book.

Ecole et la Vie Hachette Education

This volume presents an exhaustive treatment of computation and algorithms for finite fields. Topics covered include polynomial factorization, finding irreducible and primitive polynomials, distribution of these primitive polynomials and of primitive points on elliptic curves, constructing bases of various types, and new applications of finite fields to other areas of mathematics. For completeness, also included are two special chapters on some recent advances and applications of the theory of congruences (optimal coefficients, congruential pseudo-random number generators, modular arithmetic etc.), and computational number theory (primality testing, factoring integers, computing in algebraic number theory, etc.) The problems considered here have many applications in computer science, coding theory, cryptography, number theory and discrete mathematics. The level of discussion presupposes only a knowledge of the basic facts on finite fields, and the book can be recommended as supplementary graduate text. For researchers and students interested in computational and algorithmic problems in finite fields.

Le calcul simplifié par les procédés mécaniques et graphiques Springer

L'action qualité est fondamentalement tributaire de la rigueur accordée au processus expérimental ainsi qu'à la maîtrise des outils adaptés aux paramètres d'analyse. Faire de l'étude qualité une simple application statistique théorique serait le signe d'une vision tronquée des causes symptomatiques de la qualification des produits. Les thèmes traités dans cet ouvrage sont structurés selon le cheminement de l'action qualité et de la nouvelle organisation du travail. Contrôler des produits, c'est avant tout les surveiller et les conserver jusqu'à la fin de la mission donnée. La surveillance est l'observation du dépassement d'un pourcentage de rebuts fixé au préalable. Analyser les causes d'un éventuel dérèglement du procédé tend à minimiser le pourcentage de rebuts. L'action d'accepter ou de refuser la cote issue du procédé de fabrication doit toujours s'accompagner d'un rapport en vue d'améliorer la fabrication. De nombreux cas sont traités dans ce volume didactique qui s'adresse aux techniciens qualité, aux universitaires et aux professionnels.

Calcul CP John Benjamins Publishing

In the light of growing insights into the universal temporal-semantic nature of aspectual distinctions, today's aspectology has broadened its attention from restrictedly event-defining functions of aspect on the sentence level towards its primary perspectival functions on the discourse/situation level. Hereby it attempts to relate these functions to each other in ways that stimulate consistently language processing on a more solid perceptual-conceptual and pragmatic basis. Reflecting in various ways this general tendency. The 13 papers collected in this volume are oriented to four fields of research: (1) Developmental properties of aspect and tense; (2) Ideo-pragmatic and conceptual-semantic correlates of aspect and the perspectival organisation of discourse; (3) Aspect, case and discourse; (4) Aspect in literary discourse. The editor's Introduction gives a comprehensive survey of contemporary aspectology and its development towards a proper integration of discourse/situation conditions. Besides cross-linguistic considerations (including English), the languages analyzed specifically are Russian, Bulgarian, Lithuanian, French and Finnish.

Advances in Aeronautical Sciences; Proceedings Lavoisier

Organisée par semaines et par séances, la programmation articule six modules thématiques : Écriture chiffrée : 46 séances pour donner du sens à cette écriture. Comptine : 8 séances pour structurer la comptine orale. Problèmes et calculs : 19 séances pour donner du sens aux opérations. Décompositions, compléments et tables : 12 séances pour installer des répertoires essentiels au calcul. Dire / écrire : 11 séances pour faire le lien entre numération orale et numération écrite. Opérations : 15 séances pour aborder les techniques opératoires. Les six modules

proposent des activités de découverte, d'entraînement ou d'approfondissement ainsi que des rituels. Les erreurs récurrentes des élèves sont systématiquement relevées et accompagnées de procédures ciblées. Le CD-Rom vendu avec Numération et calcul CP contient le matériel nécessaire à la mise en oeuvre des séances, sous forme de nombreux fichiers PDF : Affichages collectifs de référence ou supports d'activités (ex : le jeu « Champion des nombres ») à imprimer et / ou à vidéoprojecter. Fiches à photocopier (répertoires d'exercices et leurs corrigés) Matériel manipulable (cartes à points, cartes pour le jeu des couples ...) Évaluations (déroulés pédagogiques et fiches d'évaluation pour chaque module sur les cinq périodes). Vendue à part : une pochette avec tous les posters à utiliser en collectif en vidéo-projection.

Travaux Atlantica Séguier Frontières

The Monte Carlo method is inherently parallel and the extensive and rapid development in parallel computers, computational clusters and grids has resulted in renewed and increasing interest in this method. At the same time there has been an expansion in the application areas and the method is now widely used in many important areas of science including nuclear and semiconductor physics, statistical mechanics and heat and mass transfer. This book attempts to bridge the gap between theory and practice concentrating on modern algorithmic implementation on parallel architecture machines. Although a suitable text for final year postgraduate mathematicians and computational scientists it is principally aimed at the applied scientists: only a small amount of mathematical knowledge is assumed and theorem proving is kept to a minimum, with the main focus being on parallel algorithms development often to applied industrial problems. A selection of algorithms developed both for serial and parallel machines are provided. Sample Chapter(s). Chapter 1: Introduction (231 KB). Contents: Basic Results of Monte Carlo Integration; Optimal Monte Carlo Method for Multidimensional Integrals of Smooth Functions; Iterative Monte Carlo Methods for Linear Equations; Markov Chain Monte Carlo Methods for Eigenvalue Problems; Monte Carlo Methods for Boundary-Value Problems (BVP); Superconvergent Monte Carlo for Density Function Simulation by B-Splines; Solving Non-Linear Equations; Algorithmic Efficiency for Different Computer Models; Applications for Transport Modeling in Semiconductors and Nanowires. Readership: Applied scientists and mathematicians.

Journal Des Instituteurs Et Des Institutrices Editions Bréal

This book is mainly devoted to some computational and algorithmic problems in finite fields such as, for example, polynomial factorization, finding irreducible and primitive polynomials, the distribution of these primitive polynomials and of primitive points on elliptic curves, constructing bases of various types and new applications of finite fields to other areas of mathematics. For completeness we include two special chapters on some recent advances and applications of the theory of congruences (optimal coefficients, congruential pseudo-random number generators, modular arithmetic, etc.) and computational number theory (primality testing, factoring integers, computation in algebraic number theory, etc.). The problems considered here have many applications in Computer Science, Coding Theory, Cryptography, Numerical Methods, and so on. There are a few books devoted to more general questions, but the results contained in this book have not till now been collected under one cover. In the present work the author has attempted to point out

new links among different areas of the theory of finite fields. It contains many very important results which previously could be found only in widely scattered and hardly available conference proceedings and journals. In particular, we extensively review results which originally appeared only in Russian, and are not well known to mathematicians outside the former USSR.

Computational and Algorithmic Problems in Finite Fields Springer Science & Business Media

Des rappels de cours sur les 20 notions indispensables du CP : les nombres de 0 à 99 ; les tables d'addition ; le calcul mental de sommes et de différences ; les mesures. 100 exercices progressifs et variés, à effacer et à refaire jusqu'à ce que les points de programme soient maîtrisés. 65 exercices supplémentaires dans les encadrés " efface tout et entraîne-toi ! ", pour s'exercer toute l'année et revoir régulièrement les notions fondamentales. Les corrigés de tous les exercices.

Status and Prospects of Computational Fluid Dynamics for Unsteady Transonic Viscous Flows World Scientific

Applications of computational aerodynamics to aeronautical research, design, and analysis have increased rapidly over the past decade, and these applications offer significant benefits to aeroelasticians. This paper traces the past developments by means of a number of specific examples, and projects the trends over the next several years. The crucial factors that limit the present capabilities for unsteady analyses are identified; they include computer speed and memory, algorithm and solution methods, grid generation, turbulence modeling, vortex modeling, data processing, and coupling of the aerodynamic and structural dynamic analyses. The prospects for overcoming these limitations are presented, and many improvements appear to be readily attainable. If so, a complete and reliable numerical simulation of the unsteady, transonic viscous flow around a realistic fighter aircraft configuration could become possible within the next decade. The possibilities of using artificial intelligence concepts to hasten the achievement of this goal are also discussed. Key words include: Flutter predictions; Oscillating wings; and Unsteady computational aerodynamics.

Journal of Research of the National Bureau of Standards Hachette Éducation

This volume gathers the contributions of six world experts to a course on combustion modelling. Therefore, a pedagogical effort has been made in writing up these texts, which cover state of the art advances in most aspects of combustion science. The book is aimed at students, researchers and engineers, as was the course. *JPRS Report FIB* - International Federation for Structural Concrete This volume contains lectures given at the Saint-Flour Summer School of Probability Theory during 17th Aug. - 3rd Sept. 1998. The contents of the three courses are the following: - Continuous martingales on differential manifolds. - Topics in non-parametric statistics. - Free probability theory. The reader is expected to have a graduate level in probability theory and statistics. This book is of interest to PhD students in probability and statistics or operators theory as well as for researchers in all these fields. The series of lecture notes from the Saint-Flour Probability Summer School can be considered as an encyclopedia of probability theory and related fields.
