Ayurveda And Panchakarma The Science Of Healing And Rejuvenation Anshan Pub

This book discusses Asian medicine, which puts enormous emphasis on prevention and preservation of health, and examines how, in recent decades, medical schools in Asia have been increasingly shifting toward a curative approach. It offers an ethnographic investigation of the scenarios in China and India and finds that modern students and graduates in these countries perceive Asian medicine to be as important as Western medicine. There is a growing tendency to integrate Asian medicine with Western medical thought in the academic curriculum that has led to a gradual decline of Asian medical thought and practices. At the same time, there has been a massive rise in patent drugs, health products and cosmetics being sold under the brand names of Asian medicine or herbal medicine. Most of these drugs and health products do not follow the classical formulas found in the Asian medical texts. The book analyses these texts and concludes that contemporary Asian medicine rarely follows the classical texts, and in fact uses Asian medicine brands to sell Western health products and practices. With a particular focus on the formal and professional sector of Chinese herbal medicine and Indian ayurvedic medicine in urban areas, this book appeals to a broad readership, including undergraduate students and academics as well as non-experts. Md. Nazrul Islam is an Associate Professor in the General Education Office, United International College, Beijing Normal University-Hong Kong Baptist University. He was a Visiting Associate Professor in the School of Population and Public Health, University of British Columbia (2015-16) during which time he completed this book manuscript.

The quality of Ayurveda education in India has been a matter of concern since long and has attracted criticisms of various kinds. Inadequate exposure to basic clinical skills, poorly structured curriculum, mushroom growth of sub-standard colleges, and, ambiguities in the policies on integration - are a few points among others- that have been raised from time to time to suggest that the quality of Ayurveda training is poor. This work is based on a nationwide survey that included interns, postgraduate students and teachers from 32 Ayurveda institutions spread across 18 states of India and tries to record the perceptions of students and teachers on the quality of Ayurveda education. This is an abridged version of the doctoral thesis submitted to Banaras Hindu University.

This volume looks at how accumulation in postcolonial capitalism blurs the boundaries of space, institutions, forms, financial regimes, labour processes, and economic segments on one hand, and creates zones and corridors on the other. It draws our attention to the peculiar but structurally necessary coexistence of both primitive and virtual modes of accumulation in the postcolony. From these two major inquiries it develops a new understanding of postcolonial capitalism. The case studies in this volume discuss the production of urban spaces of capital extraction, institutionalization of postcolonial finance capital, gendering of work forms, establishment of new forms of labour, formation of and changes in caste and racial identities and networks, and securitization—and thereby confirm that no study of contemporary capitalism is complete without thoroughly addressing the postcolonial condition. By challenging the established dualities between citizenship-based civil society and welfare-based political society, exploring critically the question of colonial and postcolonial difference, and foregrounding the material processes of accumulation

against the culturalism of postcolonial studies, this volume redefines postcolonial studies in South Asia and beyond. It is invaluable reading for students and scholars of South Asian studies, sociology, cultural and critical anthropology, critical and praxis studies, and political science.

A Hand Book of History of Ayurveda BRILL

This book examines depression as a widely diagnosed and treated common mental disorder in India and offers a significant ethnographic study of the application of a traditional Indian medical system (Ayurveda) to the very modern problem of depression. Based on over a year of fieldwork, it investigates the Ayurvedic response to the burden of depression in the Indian state of Kerala as one of the key processes of the local appropriation or glocalization of depression. More broadly, Lang considers: What happens with the category of depression when it leaves the West and travels to South Asia? How is depression appropriated in a South Asian society characterized by medical pluralism? She explores on the level of ideas, institutions and materialities how depression interacts with and changes local worlds, clinical practice and knowledge and subjectivities. As depression travels from 'the West' to South India, its ontology, Lang argues, multiplies and thus leads to what she calls 'depression multiple'.
