The Hate Factories of America In the past fifty-seven years, Robert "Big Head" Whitcomb has spent over thirty-five years incarcerated in the state prison system and the federal prison system. He saved seven correctional officers and a number of convicts from certain death. He did what he thought was right, but he thinks himself no hero; he is just a convict who believed that even in the hate factories of America, there can still be a little good.

[Raspberry Pi For Dummies](#) Adobe Press Firewalls, Network Address Translation (NAT), network logging and accounting are all provided by Linux's Netfilter system, also known by the name of the command used to administer it, iptables. The iptables interface is the most sophisticated ever offered on Linux and makes Linux an extremely flexible system for any kind of network filtering you might do. Large sets of filtering rules can be grouped in ways that makes it easy to test them and turn them on and off. Do you watch for all types of ICMP traffic--some of them quite dangerous? Can you take advantage of stateful

filtering to simplify the management of TCP connections? Would you like to track how much traffic of various types you get? This pocket reference will help you at those critical moments when someone asks you to open or close a port in a hurry, either to enable some important traffic or to block an attack. The book will keep the subtle syntax straight and help you remember all the values you have to enter in order to be as secure as possible. The book has an introductory section that describes applications, followed by a reference/encyclopaedic section with all the matches and targets arranged alphabetically.
