This volume presents transcripts of seven hearings held in May, 1991, on the reauthorization of the Higher Education Act of 1965. Of the hearings held in the District of Columbia the first focused on the Pell Grant and Stafford Loan programs and featured witnesses from around the country addressing educational finance. The second hearing focused on the process of accreditation, certification and licensing that determines institutional participation in the Federal student aid programs and featured witnesses from educational institutions, and professional associations. The final hearing presented the testimony of college executives, representatives of educational associations and others on Title VI (which supports international education) and Title III (concerned with institutional aid and funding for institutional facilities). The hearings in other cities provided an opportunity for legislators to hear additional suggestions and recommendations from students, teachers, administrators, institutional executives and state agencies on the reauthorization of higher education programs. Included are the prepared statements of the witnesses as well as additional statements, correspondence and supplemental material. (JB)

This 2007 third edition continues to be a comprehensive and authoritative guide to the business, practice, law, and practical use of project finance. It covers the complete project finance structure, from conception to negotiation to debt closing, and from project difficulties to successful restructuring. The book continues to be accessible to those with little experience in project finance, while maintaining the insight and detail of previous editions that has made it a valuable reference for the experienced lawyer, manager, banker, contractor, and government official. This edition focuses on a real-world, practical approach to project finance, without the overuse of case studies and economic theory. Yet the contract forms, detailed glossary, index, and project finance bibliography make it a complete text.

Since the 1970s, the practice of financing major private and public sector capital-intensive projects has shifted to an ever-greater reliance on private funding sources, as opposed to direct financing through the issuance of corporate or government bonds. In the 1990s, these financing practices have undergone further changes with the increasing globalization of capital markets, the growth of derivative instruments, and the rapid increase in information technology that enhances cash-management practices. Today's project financing market is increasingly using sophisticated capital market, bank and agency financing mechanisms as well as using derivative instruments for asset and liability management. Thus, financial market innovations are bringing the once separate fields of project financing and international finance more closely together. This is the first book to treat

both topics as an interrelated whole, for contemporary project financing cannot be fully understood without a good working knowledge of the international financial markets that have developed the various financing techniques and funding sources being used. The book provides an in-depth description of cross-border project financing as a technique for financing capital-intensive projects, as well as an overview of certain financing and derivative instruments currently available in the global financial markets. The first part of the book provides an overview of certain funding and derivative instruments currently used in the international financial markets, including a general overview of financial innovations that have occurred in recent decades. Topics covered include an introduction to the syndicated Euro-credit market; an overview of various marketable debt securities actively used in the international financial markets; an introduction to depository receipt as an innovative way of raising cross-border equity capital; an elaboration of the derivative instruments most commonly used in the project financing arena, including interest rate, currency and commodity swaps; and finally an overview of banks' off-balance sheet activities as a critical driving force for the participation of banks in the international financial and derivative markets. The second part of the book provides an in-depth analysis of project financing that concentrates on the financier's perspective. Topics covered include a general overview of the project financing industry; a step-by-step description of a typical cross-border project finance transaction; a description of the main characteristics and advantages of project financing as opposed to more traditional corporate lending practices; an overview of appraisal techniques for assessing project financing; a comprehensive analysis of the different risk management techniques used in project financing for reducing, distributing and hedging risks; and a brief overview of certain limited-resource financing schemes. The book includes a special focus on the various stages of the risk management process for project financing, elaborating on the different stages of risk identification, risk assessment, risk reduction, risk distribution and hedging and insurance. The authors also provide a comprehensive glossary of terms relating to international finance and project financing. This book will fulfill the need for an essential text on project financing as well as a professional reference guide.

Any project which involves an EPC contract is also likely to involve a number of other complicated contracts. The challenge of the parties to an EPC contract is not to try to eliminate risk but rather put into place a narrative structure that enables the parties to predict the contractual result that would obtain if a risk materializes. If the EPC contract does not allow the parties to determine the consequences of an unanticipated situation, they will have to look to an expert, mediator, tribunal, or court to impart guidance or pass judgment. The sample forms of contract contained in Volume 2 of *Understanding and Negotiating EPC Contracts* are intended to serve as a guide to demonstrate how risks and responsibilities can be allocated among project sponsors, EPC contractors and the various other parties that may be involved in a project. Collectively the sample forms in this volume offer an extraordinary resource that provides the benefit of lessons learned and priceless insight into any project being undertaken which can help assure the resilience of any EPC project.

The author knows about what she speaks. She is a lawyer and president of her Manhattan co-op building. She had no prior knowledge of co-op and condo conversion before her residence went that way, and she had to learn and learn fast. Now she shares the expertise she's accrued, and she presents it in a well-ordered format. Guiding readers into a co-op or condo situation and ensuring their future of comfortable and productive living are the purposes of Shapiro's handbook; and to that end she supplies a complete codification of all the rules and necessary procedures. Dealing with the board is, of course, the major concern of a co-op or condo owner, and Shapiro is encouraging and explicit as she draws up the appropriate behavior to guarantee a successful board relationship. A book for all public libraries. - Brad Hooper; 368p-
