Transaksi Bisnis E-commerce telah mengubah paradigma bisnis klasik dengan menumbuhkan model-model interaksi antara pelaku usaha dan pembeli di dunia virtual. Perkembangan cara transaksi ini berakibat juga dengan perbedaan karakteristik sengketa dalam transaksi e-commerce. Secara tradisional, sengketa disebabkan karena adanya ketidakserasian antara para pihak yang mengadakan hubungan hukum, karena hak salah satu pihak terganggu atau dilanggar. Apabila transaksi e-commerce tersebut berlangsung di antara para pihak, yang merupakan penduduk dua negara yang

berbeda, maka akan timbul masalah pilihan hukum dan pilihan forum. Dalam peraturan perundang-undangan di Indonesia, belum ada perkembangan baru dalam hal ini tentang pilihan hukum transaksi e-commerce. Pengaturan yang ada masih didasarkan pada Pasal 18 A.B untuk menentukan hukum yang berlaku dalam sengketa transaksi internasional, walaupun transaksi e-commerce telah diatur oleh Undang-undang Nomor 11 Tahun 2008 Tentang Informasi dan Transaksi Elektronik, namun Undang-undang ini belum mengatur tentang pilihan hukum dan forum bila terjadi sengketa e-commerce internasional.

E-COMMERCE - CONCEPTS, MODELS AND STRATEGIES. Tata McGraw-Hill Education

As E-Commerce refers to the paperless exchange of business information using Electronic Data Interchange (EDI), electronic funds transfer and other network-based technologies, companies have to look at integrating their backend and front office processes and activities. This book presents the technology and non-technology aspects of e-commerce and takes it to a level that gives a clear understanding of the basic building blocks for its implementation. The book begins with the basics in the first and second part, and describes the Internet and Intranets. The third part describes EDI, the UN/EDIFACT Standards, Extranets and tracking tools. Part four comprises security - a critical component of e-commerce. Different cryptographic systems and Public Key Certification method based on X.509 standards have been covered. Part five delves into reengineering and management of change and legal issues.

*Handbook of Research on Emerging Trends and Applications of Machine Learning* Tata McGraw-Hill Education Provides an understanding of the

technologies of electronic commerce. The text does not concentrate solely on the Internet but suggests that the Internet is only a bridge technology. Each chapter contains an overview of a theory or practice followed by one or more business case studies.

As the use of technology has considerably increased in B2B e-commerce, it becomes imperative to address the issues of trust that emerge in the context of technology. Trust and Technology in B2B E-Commerce: Practices and Strategies for Assurance focuses on various trust issues that emerge from deployment of various e-commerce technologies in interorganizational relationships. Some of these issues relate to security, privacy, authentication, non-repudiation, quality of Web interface, system performance, infrastructure, and environmental factors. This book contributes to the ongoing process of developing a framework for understanding the process of building trust in B2B e-commerce.

**Proceedings of a Workshop on Deterring Cyberattacks** Nusamedia

In a world of increasing dependence on information technology, the prevention of cyberattacks on a nation's important computer and communications systems and networks is a problem that looms large. Given the demonstrated limitations of passive cybersecurity

defense measures, it is natural to consider the possibility that deterrence might play a useful role in preventing cyberattacks against the United States and its vital interests. At the request of the Office of the Director of National Intelligence, the National Research Council undertook a two-phase project aimed to foster a broad, multidisciplinary examination of strategies for deterring cyberattacks on the United States and of the possible utility of these strategies for the U.S. government. The first phase produced a letter report providing basic information needed to understand the nature of the problem and to articulate important questions that can drive research regarding ways of more effectively preventing, discouraging, and inhibiting hostile activity against important U.S. information systems and networks. The second phase of the project entailed selecting appropriate experts to write papers on questions raised in the letter report. A number of experts, identified by the committee, were commissioned to write these papers under contract with the National Academy of Sciences. Commissioned papers were discussed at a public workshop held June 10-11, 2010, in Washington, D.C., and authors revised their papers after the workshop. Although the authors were selected and the papers reviewed and discussed by the committee, the individually authored papers do not reflect consensus views of the committee, and the reader should view these papers as offering points of departure that can stimulate further work on the topics discussed. The papers presented in this volume are published essentially as received from the authors, with some proofreading corrections made as limited time allowed.

As today's world continues to advance, Artificial Intelligence (AI) is a field that has become a staple of technological development and led to the advancement of numerous professional industries. An application within AI that has gained attention is machine learning. Machine learning uses statistical techniques and algorithms to give computer systems the ability to understand and its popularity has circulated through many trades. Understanding this technology and its

countless implementations is pivotal for scientists and researchers across the world. The Handbook of Research on Emerging Trends and Applications of Machine Learning provides a high-level understanding of various machine learning algorithms along with modern tools and techniques using Artificial Intelligence. In addition, this book explores the critical role that machine learning plays in a variety of professional fields including healthcare, business, and computer science. While highlighting topics including image processing, predictive analytics, and smart grid management, this book is ideally designed for developers, data scientists, business analysts, information architects, finance agents, healthcare professionals, researchers, retail traders, professors, and graduate students seeking current research on the benefits, implementations, and trends of machine learning.
